

Trenching Versus Rodding

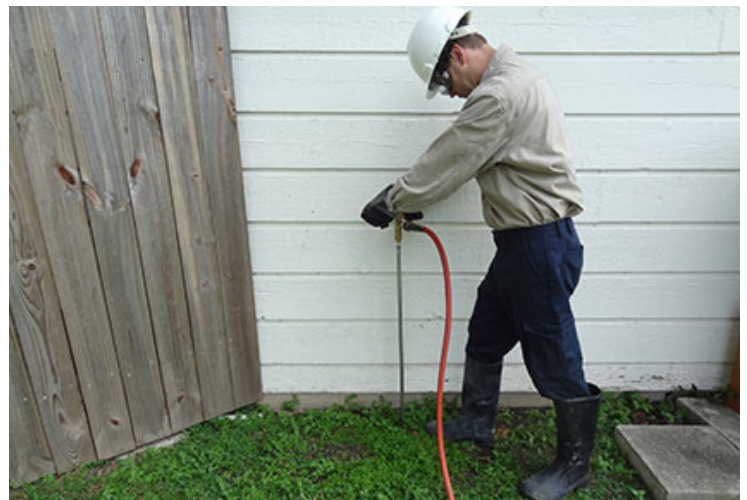

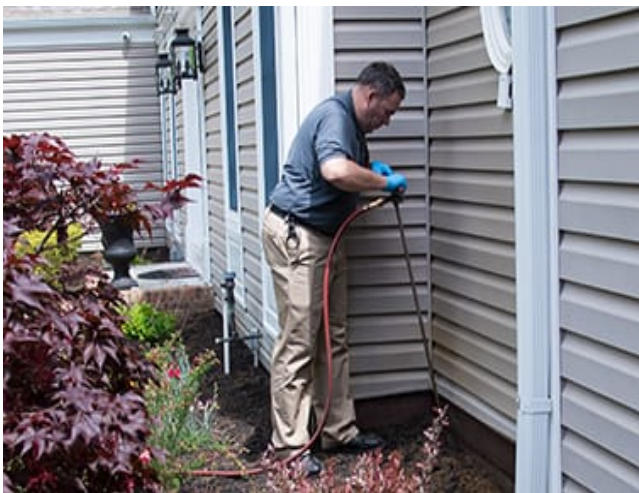

Method for Homeowners or unequipped professionals (San Antonio has over 500 pest control guys who work for themselves as the only employee--they can not afford to own a professional termite rig that consists of a minimum of 25 gallon tank, pump, and special rodding device with hose).

*This method only treats 6" of soil (normally needs to be repeated several times)

*Warranties 'vary' depending on how confident the provider is

We do not offer this service.

This method treats 18" of soil. This method is recommended by all reputable termite companies that offer solid warranties for their services.

This method is warranted and recommended by the Products manufacturer.

This is our method of termite treatments.
